

Additional benefit opportunity for ASPIH members

Would you like access to a web-based authoring platform to develop new scenarios with other ASPIH members?

As from 17th June 2018, **iRIS**, the health simulation authoring platform will be added to the list of [benefits](#) made available to ASPIH Institutional (named members) Individual and student members. Visit the new **iRIS** [website](#) where you can find out more.

Access to the ASPIH **iRIS** portal will not be automatic, it will be made available on an on-demand basis with members completing an [online](#) justification form detailing their project and/or courses for development. For inspiration, [view the work](#) already produced by our Paediatrics SIG last years. There will be an expectation that users granted access will be asked to provide feedback at regular intervals to both ASPIH and TWM E8.

Champions of **iRIS** may also be asked to present their case studies in a dedicated workshop at ASPIH 2018 Southport.

What does iRIS offer?

A web-based, standardised simulation development template supporting the use of simulators and SPs

Single-click access to linked scenario resources and briefings

Significant time efficiencies for authoring content

A repository of scenarios developed and shared by ASPIH members including all resources

Interact and collaborate with other ASPIH members

Support for the ASPIH SBE Standards

'iRIS addresses the re-inventing the wheel phenomenon that often exists in the simulation and education communities'

Dr David Grant, Chair of the Bristol Medical Simulation Centre
